

Salinity Seasonality

Table of contents

<environment: R_GlobalEnv>

Assign sites to Western, Central, or Eastern Sound.

Summarize and plot.

Downloaded data contained high-frequency values, from which daily mean salinity was calculated. Those daily means were then averaged to month for each station.

Mean monthly salinity (mean of daily means) by station x year:

All years combined:

From this second graph, I'd say April-May-June has the lowest salinity, and Oct-Dec is highest.

The graph of individual years, I'd say that's about right, with the low period starting in March sometimes. April and May are generally encapsulated in the low months. Highest months can sort of vary, anytime from Sept-Jan depending on conditions, but Nov-Dec are generally included.

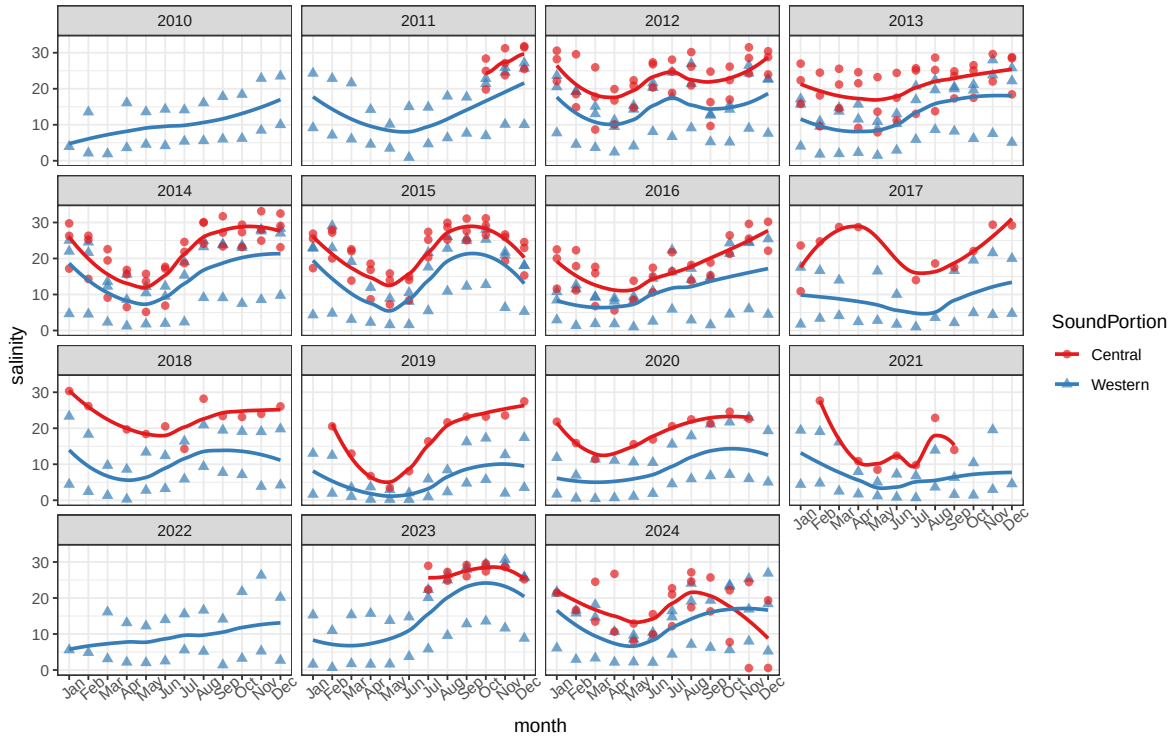

Figure 1: Mean monthly salinity for each Mississippi Sound USGS station, faceted by year.

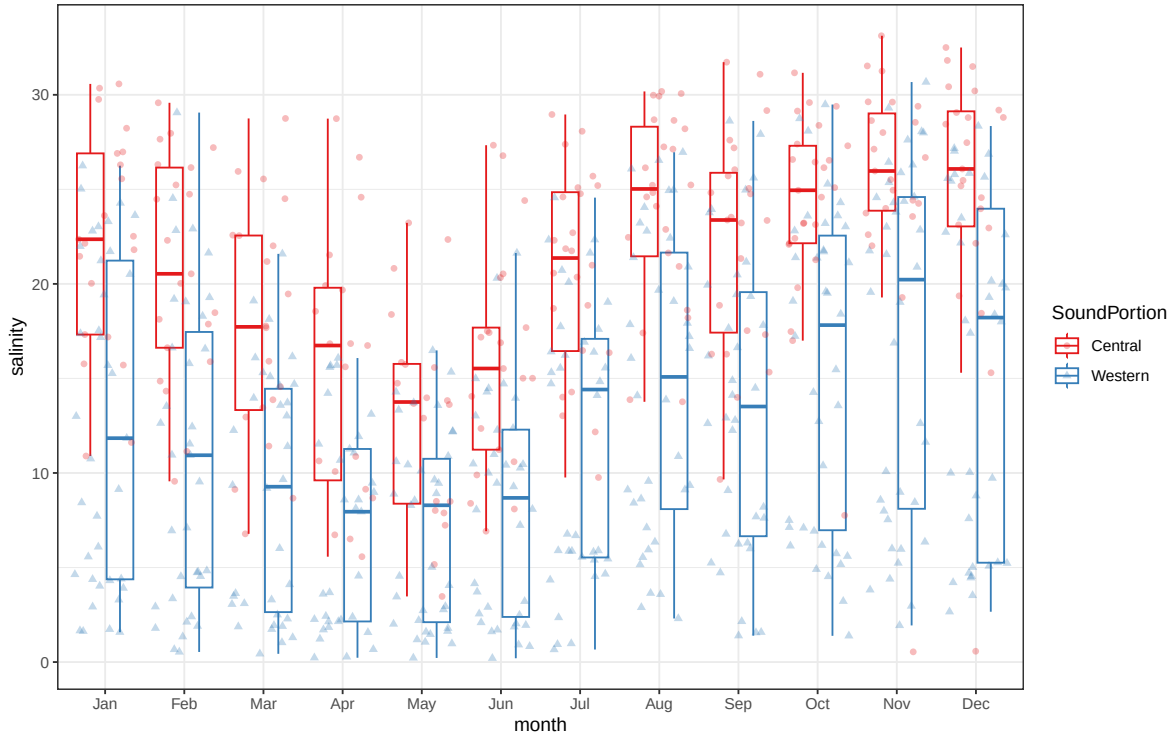

Figure 2: Mean monthly salinity for each Mississippi Sound USGS station, across years. Each point represents a single station in a single year.
